

COMPANY CASE STUDY

Merantix AG - Robotic Food Supports Machine Learning

The Client

Merantix AG helps young companies build and scale their innovative, AI-based solutions. At the AI Campus, a coworking space in Berlin Mitte, Merantix AG has created a unique incubation platform where more than 100 members from different AI-based companies meet and collaborate on a daily basis. Thus, by transferring world-leading research, Merantix AG helps to develop new products that transform existing industries and create new industries.

The Problem

Located in the northern part of Berlin Mitte, the AI Campus lacked a gastronomic offer in the immediate vicinity for its members. For about 400 members in an innovative environment, a suitable gastronomic solution was sought, which is personnel and cost efficient and does not require the construction of a complete canteen. For flexible working hours, a correspondingly flexible and culinary convincing solution was needed.

The Solution

Since the launch of the Aitme Robotic Kitchen in December 2021, the problem of a lack of gastronomic offerings is history. With a changing menu consisting of healthy and delicious bowls, pasta dishes and salads, Aitme offers the AI Campus a varied and 24/7 available offer.

"The Aitme cooking robot has been very well received by our members and has become an interactive part of the AI Campus. I especially like the regularly changing menu and the possibility to customize the dishes to suit my tastes."

DR. RASMUS ROTHE
Co-Founder Merantix AG

Merantix AG trusts in Aitme as a reliable partner for the company catering of the future. Book your meeting [here](#) and we will evaluate together to what extent the Aitme Robotic Kitchen could be a suitable solution for your catering concept.
